Lab 3 Final Submission Report

Authenticated IT ticketing, staff operations, administrator safety, and release evidence

FINAL MAIN RELEASE

Release commit: **92fac36** on **main**

Final Release PR #46 was peer-approved and merged after PRs #40-#45 completed the contract, implementation, review, and evidence stages.

Release gate	Result
Server regression	15 files / 92 tests passed twice
Client regression	15 files / 50 tests passed twice
Production builds	Server and client passed
Playwright E2E	13 passed across desktop, tablet, and mobile
Peer review	Approved and merged into main

1. Scope delivered

- Authenticated sessions with first-login password change, CSRF protection, expiry, logout, and role-aware navigation.
- Requester-owned tickets and attachments, public comments, and the requester resolution indication.
- Shared IT Staff and Administrator queue with search, filters, sorting, pagination, assignment, IT Priority, and the eight-status matrix.
- Public comments and staff-only Internal Notes with server-side visibility and ownership enforcement.
- Administrator user management with safe role and activation changes, initial-password reset, duplicate-email validation, and last-administrator protection.
- Lab 2 data-preserving migration and idempotent seed behavior.
- Desktop, tablet, and mobile evidence for authentication, User Management, Staff Queue, and Staff Ticket Detail.

2. Verification results

Check	Executed result
Server regression	15 test files / 92 tests passed twice against the dedicated _test database.
Client regression	15 test files / 50 tests passed twice; the Create Ticket test waits for reference data before submitting.
Server build	TypeScript production build passed.
Client build	TypeScript and Vite production build passed.
Playwright E2E	13 tests passed: desktop functional flows plus tablet/mobile responsive evidence.
Migration and seed	Migration regression covers preserved Lab 2 rows, collision-safe IDs, pending credentials, and deterministic reseeding.
Repository hygiene	git diff --check passed; local environment files and credentials remain ignored.

Detailed traceability is maintained in docs/lab-03/tests.md and the approved contract documents.

3. Peer-review and release history

Stage	Evidence
Contract	PR #40 approved and merged as 40ca398.
Authentication and migration	PR #41 merged as b49c8b2 after credential and path-gate fixes.
Requester regression	PR #42 merged as 0ee0002.
Staff queue	PR #43 merged as c1cd708.
Administrator implementation	PR #44 approved after requested changes and merged as bd5872a.
Documentation follow-up	PR #45 approved and merged as e82ac21.
Final integration	PR #46 approved and merged into main as 92fac36.

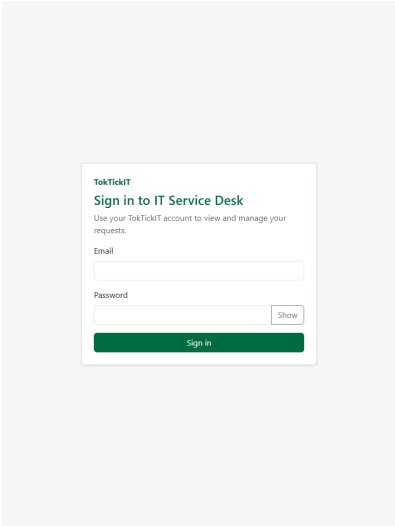

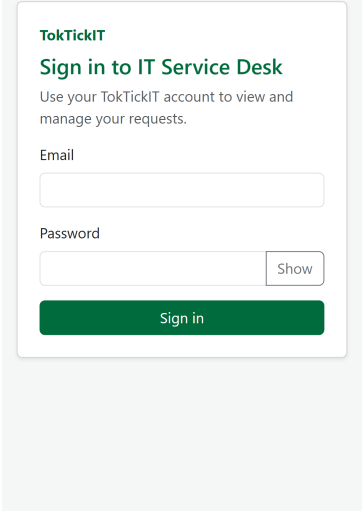

The peer-review record links the requested changes, responses, approvals, and merge commits. No implementation PR remains open after the final integration.

4. Acceptance-criterion coverage

Area	Evidence
AC-01 to AC-04	Login, first-login password gate, logout/expiry, CSRF, and role-aware session APIs and UI tests.
AC-05 to AC-06	Requester ownership, comments, resolution indication, attachment compatibility, and regression E2E.
AC-07 to AC-09	Shared queue, staff detail, assignment, IT Priority, status matrix, public comments, and Internal Notes.
AC-10 to AC-11	Administrator listing, filtering, create/edit/activation/reset, and safety protections.
AC-12 to AC-13	Migration preservation, deterministic seed, forged identity rejection, and role boundaries.
AC-14 to AC-15	Responsive screenshots, style checks, full regression suites, builds, and Playwright release checks.

5. Responsive evidence - Authentication

Real Playwright captures from the merged Lab 3 release. The three columns show the required desktop, tablet, and mobile evidence.

		
Desktop	Tablet	Mobile

6. Responsive evidence - User Management

Real Playwright captures from the merged Lab 3 release. The three columns show the required desktop, tablet, and mobile evidence.

Real Playwright captures from the merged Lab 3 release. The three columns show the required desktop, tablet, and mobile evidence.

		
Desktop	Tablet	Mobile

9. Submission checklist

- Contract documents reviewed and linked to GitHub issues.
- Migration and implementation tests pass twice where determinism matters.
- Server and client builds and the complete Playwright suite pass.
- Security, ownership, role, and responsive cases are covered by executable tests and real evidence.
- Reviewer and AI-use records reflect the merged main release.
- Final Release PR #46 is merged into main at commit 92fac36.
- This report is generated from the final main source and is ready for submission.

Excluded by the approved Lab 3 scope: external identity providers, password recovery email, multi-role accounts, staff assignment history, and administrative deletion. Deactivation is used instead of deletion so historical ownership and authored communication remain queryable.
